## MEFY2MC - Introduction

### Introduction

---

## MEFY2MC - Teaching profile

### Learning outcomes

This complementary master's programme aims to prepare doctors to become officially recognised holders of the specific professional title of Specialist Doctor in Physical and Rehabilitation Medicine (Ministerial Decree of 20.10.2004, published on 22.11.2004).

### Programme structure

The programme includes full-time apprenticeships in approved services and teaching centres. It lasts at least five years, full-time, and includes at least 4 years of studies dedicated to specific diagnostic techniques and treatment in the domain of Physical and Rehabilitation Medicine, including the socio-professional reintegration of handicapped persons. At least one year is dedicated to various techniques in preparation for the carrying out of neurophysiological examinations.

The practical training project, established by the university promoter, must be approved by the ministerial validation committee for the speciality. These apprenticeships include being on call.

N.B. the candidate will need to accomplish a one-year work experience period abroad, in a service approved by the Committee for Physical and Rehabilitation Medicine, or in a research laboratory, preferably in the third or the fourth year of studies.

## MEFY2MC Detailed programme

### Programme by subject

Parallel to the practical training, the candidate specialist will follow a university course organised as follows :

#### First part

An inter-university programme consisting of lectures on different subjects relating to Physical and Rehabilitation Medicine, covering the diagnoses and evaluation of injuries, disabilities and handicaps and physical and rehabilitation medical treatments for locomotor aid where the aetiology is traumatic, orthopedic, rheumatic, neurological, congenital or linked to internal pathology. These studies must prepare the "MACCS" for the knowledge of rehabilitation in children and adults as much on a functional as on a social and professional level (including pain treatment and rehabilitation). To this is added a complementary training session in the domain of pulmonary and/or cardiac rehabilitation. The inter-university sessions amount to 30 hours a year, 4 hours of which are on algology.

An intra-university course consisting of :

MEFY2120 Réhabilitation motrice et compléments de médecine physique[15h] (in French) Léon Plaghki

- Supervised practical exercises (30 hours per year).
- Attendance of the Physical and Rehabilitation Medicine lectures linked to the approved apprenticeship periods. (see subjects within the different domains of Physical and Rehabilitation Medicine linked to the above speciality), to be certified in the training report notes (30 hours per year).
- Attendance, each year, of lectures in other specialities (neuro-locomotor, radiology, cardiac rehabilitation, pulmonary rehabilitation and pediatric rehabilitation, also including 10 hours of algology (anaesthetics, psychiatry, etc..) to be certified in the training report notes (30 hours per year).

The theoretical sessions of the first two years form part of the specific university training programme (FUS, in French).

#### Second part

After the first 2 years, the " MACCS" will continue his studies including, among other activities :

- Attendance of further training seminars in Physical and Rehabilitation Medicine (to be certified in the course report notes).
- Attendance of national and international scientific meetings.
- Active annual participation in at least one intra-university seminar.
- The writing of a scientific article to be presented at the end of the 4th year and accepted for publication as the principal author in the 5th year, either for a journal with a peer review representative of the speciality or an annex speciality (orthopaedics, neurology, rheumatology...), or indexed in the Medline. In the case of a journal not indexed in the Medline, prior approval must be obtained from the academic supervisor of the master's programme.
- The teaching Committee recommends the taking of the European Board exam in the speciality.

## The programme's courses and learning outcomes

---

For each UCL training programme, a [reference framework of learning outcomes](#) specifies the competences expected of every graduate on completion of the programme. You can see the contribution of each teaching unit to the programme's reference framework of learning outcomes in the document "In which teaching units are the competences and learning outcomes in the programme's reference framework developed and mastered by the student?"

The document is available by clicking [this link](#) after being authenticated with UCL account.

## MEFY2MC - Information

### Admission

---

*In the event of the divergence between the different linguistic versions of the present conditions, the French version shall prevail*

Decree of 7 November 2013 defining the landscape of higher education and the academic organization of studies.  
The admission requirements must be met prior to enrolment in the University.

#### General requirements

Subject to the general requirements laid down by the academic authorities, admission to the specialized Master's degree programme will be granted to students who fulfil the entry requirements for studies leading to the award of a Master's (second-cycle) degree and who hold a second-cycle diploma, degree, certificate or other qualification issued within or outside the French Community of Belgium, or whose prior learning or experience has been accredited by the Examination Board as being equivalent to at least 300 credits.

---

### Specific Admission Requirements

#### Admission conditions

- The applicant must hold the degree title of Doctor in Medecine or be a Doctor from a member country of the European Union authorising medical practice in Belgium.
- The applicant must be in possession of a document attesting that, at the end of the selection exams, he was retained as a specialist candidate in Physical and Rehabililitation Medecine, in a Belgian medical faculty.

The juridical context and practical procedures regarding these selection tests can be obtained from the secretary's office. Degree holders from outside the European Union are only allowed to register on the programme in the context of procuring a university certificate for partially specialised training for the duration of two years (if they are in the process of doing a specialisation in their country of origin) or for an in-depth specialised training course for the duration of one year (if they are already recognised as specialists in their own country).

The Royal Decree of the 30.05.2002, relating to the planning of the medical offer for the public, published on the 14.06.2002, applies to those candidates wishing to obtain the title of Specialist Doctor in Physical and Rehabililitation Medecine (those candidates are thus counted among the general practitioner candidates or specialists in the context of the numerus clausus).

#### Admission procedures

Applications for admission must be addressed to the academic supervisor. The organisation of the entrance selection tests is arranged in accordance with the calendar and the general examination rules and regulations.

## Evaluation

---

The evaluation methods comply with the [regulations concerning studies and exams](#). More detailed explanation of the modalities specific to each learning unit are available on their description sheets under the heading "Learning outcomes evaluation method".

Further to the application of the Royal Decree of 16 March, 1999, at the end of the first two years of training, the candidate will apply for an attestation proving that he has successfully accomplished a specific university training course.

The evaluation and final exam are based on :

- the presence and active participation in the lectures on the speciality (see work training notes),
- the presentation of a scientific piece of work before a national or international audience
- the publication of a piece of work with the candidate as the principal author.

In addition, the global evaluation will include the result of the European Board exam for Physical and Rehabilitation Medicine, as well as the evaluation conducted by the different training supervisors on the ability and clinical aptitudes of the candidate to practise Physical and Rehabilitation Medicine. Upon fulfilment of the above-described training requirements, the teaching committee will award the academic title in Physical and Rehabilitation Medicine.

This title does not replace official recognition by the ministerial validation committee. It attests to the successful completion of an academic and scientific study programme in the context of specialised training leading to this validation.
